A Cloud-Based Accounting & Business Management System
Providing Solutions for Businesses Needing No Limitations

About eAccounts

eAccounts, written in New Zealand, has been in business for over 10 years, quietly building from the ground up. eAccounts is a cloud-based business management system suitable for SME, medium and large enterprises. Its industrial strength capabilities cater for an unlimited number of staff, suppliers, clients and inventory levels.

With its integrated Shopping Baskets (supporting both B2C & B2B), Staff Task Management, Newsletter generation, an electronic publication system and CRM, eAccounts' functionality provides a one-stop solution for all of your business system needs.

eAccounts has helped some industry recognised brands throughout NZ, Australia and across the pacific. Customers have experienced improved processes and reduced costs as a result of implementation. Customers have the power to use a single ERP business management solution that they can access anywhere at any time.

Why Use eAccounts?

eAccounts is a web-based, full-function accounting system to make your business work when you need it, where you need it, on any device.

Gone is the need to have an expensive server in your offices that forces you to work from that location only. eAccounts hosts the equivalent of this on Amazon cloud servers and all you need to do to access your businesses financials is to login from any browser on any computer from any location.

Industrial Strength

eAccounts provides an accounting and business management system for clients with:

- ✓ 5000+ customers (debtors)
- ✓ 30,000 product lines
- ✓ 170+ users
- ✓ 500 suppliers
- ✓ Transactions exceeding $10 million on a single invoice
- ✓ Over $50 million turnover per year
- ✓ 30+ branches
- ✓ Operations in 5 countries simultaneously
- ✓ 40+ printers in their business

Our Customers

Some of our clients experiencing the benefits of eAccounts:

How It Works

eAccounts provides one seamless business management solution with the integration of its powerful modules:

Key Features

✓	Secure 24/7 access from any browser	✓	Multi-currency support

✓	Build in CRM system	✓	Logs & staff tracking
✓	Auto-run reporting	✓	Broadcast messages to all staff
✓	Highly customisable menus	✓	Direct printing
✓	Multi-branch support	✓	Powerful one stop dashboard
✓	Strong user rights management	✓	Just One Click customer log in
✓	Customisable forms	✓	Payroll integration
✓	Job costing	✓	Asset management

Suppliers

The eAccounts system can store and organise supplier information. This function gives you the power to easily keep track of current purchase orders for each supplier. Having organised supplier information means more efficient stock management. The system gives you the ability to order stock from corresponding suppliers when required, limiting out of stock situations.

Manufacturing

eAccounts can organise components and raw materials to help streamline your manufacturing process. The system has intricate stock grouping capabilities allowing you to organise stock such as raw materials by creating kits, and kit families. This feature means you are able to organise materials in a way that best works with what materials are required for each production line process, letting you quickly know what stock is required and when.

Creditors/Debtors

eAccounts allows you to have unlimited creditors and debtors in the system. You can set accounts up with customised pricing levels and apply different rules to different accounts. This segment of eAccounts seamlessly links to key areas such as banking, stock and CRM. While doing this it provides you with the ability to generate numerous reports and statements to keep account management under control.

Outsourced Administration

Running a cloud-based accounting system means that administration tasks can be easily outsourced. External chartered accountants can be given access to your eAccounts system where they can log in and manage administration tasks such as annual accounts and bookkeeping. This gives you more time to focus on the front end of your business while knowing your business is being well looked after.

Staff

eAccounts is a lot more than just an accounting system – it's also a great staff management tool. In eAccounts each staff member is appointed their own individual login. Strong user rights capabilities allow you to specify what areas staff have access too. As the manager, you can see which staff members are logged in and track what staff are doing. The system also has a useful task scheduling feature that can be used to setup and assign tasks to staff members then monitor that tasks are being completed.

Payroll

eAccounts offers payroll integration with all major payroll systems.

Inventory

eAccounts allows you to quickly view and manage inventory. Its "Stock" feature allows you to look up stock, edit / add new stock items and reorder stock. Stock management reports are generated so you know how much stock you currently have by giving you min and max quantities detailing what needs to be reordered.

Point of Sale

eAccounts has its own built in point of sale system that can be integrated with existing scanners and printers. This means staff can access the point of sales register from any computer anywhere by opening a browser, giving your sales team the ability to close sales in store or on the move.

CRM

eAccounts has a built-in customer relationship management system which allows you to organise your database and stay in contact with customers. eAccounts' own customer contact system allows you to store customer correspondence on file and quickly look it up when needed. It also has the ability to build customised monthly newsletters and automatically send them to all customers.

E Commerce

eAccounts can be linked directly to your web store. The front end of your website has the ability to talk with eAccounts keeping stock levels accurate. eAccounts has built-in shopping basket functionality for both B2C and B2B customers allowing customers and trade businesses to see their unique pricing.

General Ledger

eAccounts' intelligent general ledger module can be used for reporting. The GL allows for multi-branch and multi-currency organisations. It has full integration with your sales and stock and runs full bank reconciliations that import data directly from your bank.
